

Prevention of Legionella in Buildings

Synopsis

Since the discovery of the Legionella genus in 1976, we have slowly learned more about this deadly pathogen. There are hundreds of papers, codes and guidelines, and yet every day people still contract this potentially fatal disease. Many people have asked what equipment / devices have been associated with cases of Legionnaires' disease, The question is misleading because it does not address the root of the issue, Legionella is aqueous, it exists all around us, and given the right set of environmental issues it could cause disease. This technical meeting will address the prevention measures in buildings, the responsibility of building owners and facility management team. The technical meeting will also give a review of some well-known cases in history.

Who should attend?

- ✚ BEAM Professionals
- ✚ Facility Managers
- ✚ Property Managers
- ✚ Government officials
- ✚ Academia
- ✚ Scientists
- ✚ Engineers

About the Speaker

Mr John A. Herbert is the principal and founder of Kelcroft, a firm providing built environment consultancy services for Asia headquartered in Hong Kong SAR. Mr John A. Herbert is the Panel Chair (Innovation and Framework/BEAM Faculty) of the BEAM Society and a member of the Association of Energy Engineers (USA), and Hong Kong Association of Energy Engineers, and vice-chairman of the Hong Kong Association of Energy Services Companies.
